

CHEMICAL PADS - YELLOW

MELTBLOWN, SONIC BONDED PADS IN CHEMICAL

These pads are heavy weight absorbent with a 286 gsm and 100 pads in a bale, resulting in a heavier per square metre fabric.

This fabric construction is unique in the fact that one side is very strong and less prone to stray fibres becoming detached whilst the other side is soft and absorbent. It combines some of the best features found in a laminated pad; (no-lint & durable) while reducing the slip problem associated with absorbents that feature lamination on both surfaces.

Each pad is 40 cm wide by 50 cm long (16" x 20") and is made from a top layer of spun-bond polypropylene that is then sonically bonded to an underside of meltblown fibres. The pads can be supplied in either a rigid cardboard box, which also acts as a dispenser, or a clear plastic bag.

Yellow colour code signals emergency use the absorbent is made up of two layers that are sonically welded together Top layer is made of no lint, durable spun-bond polypropylene Core/base layer is made from high loft meltblown fibres Base layer is low slip making this a great product for foot traffic Pads are perforated down their center.
