

MAINTENANCE PADS

MAINTENANCE PADS

Meltblown, Double Lamination Pads in Maintenance 300XMBGPL

Featuring a fabric weight of 300 gsm there are 100 pads per bale which is quite a heavy fabric. This construction offers a very tough Maintenance absorbent which has both surfaces covered with a strong spun-bond polypropylene cover. This configuration offers unbeatable durability and results in an absorbent which also features virtually no-lint - that is to say that stray fibres won't become detached. Caution is recommended however, as any foot traffic should be avoided on this product as it can be very slippery under foot. Each pad is 40 cm wide by 50 cm long and is made from a highly absorbent meltblown core, sonically bonded between a top and bottom layer of spun-bond polypropylene. The pads are perforated down the middle. The pads can be supplied in either a rigid cardboard box, which also acts as a dispenser, or a clear plastic bag.

The strongest Maintenance sorbent in the meltblown family.

No lint. Meltblown core delivers high absorbency.

Tough spun-bond covers resist rips and abrasions, even when wet.

Durability reduces replacement costs

Application: The best choice when you need a tough, lint-free sorbent. Ideal for wiping sharp tools and equipment with rough edges. Great for lining spray booths. Durable enough to withstand moderate foot- and forklift traffic. Fire retardant as per ASTM 726. Ensure that disposal of these sorbents complies
